## DETAILED ACTION

### *The Information Disclosure Statement*

The prior art cited in the information disclosure statement filed on March 9, 2004 has been considered.

### *Claim Objections*

Claim 6 is objected to in that it does not end with a period. Each claim begins with a capital letter and ends with a period. Periods may not be used elsewhere in the claims except for abbreviations. MPEP 608.01 (m). Correction is required.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 2-3, 6 and 8-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 7, 9, 7 and 8, respectively, of U.S. Patent No. 6,738,136 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because the specified claims of the patent anticipate the specified claims of the application.

With respect to claims 1 and 6 of the application, patent claim 7 sets forth a system for measuring characteristics of a sample, comprising: a light source for generating a beam of light (lines 3 and 4); a mirror (lines 5-15) movable between a first position and a second position, the first position located between the light source and the sample such that light generated by the light source is reflected off the mirror and transmitted through a reflection path, the second position allowing light generated by the light source to be reflected off the sample and transmitted through the reflection path; and a spectrometer (lines 16-22) positioned along the reflection path for selectively receiving light reflected from one of the mirror and the sample and generating signals corresponding to an intensity of the reflected light at different wavelengths.

With respect to claims 2 and 3 of the application, patent claim 9 sets forth a beam splitter (lines 1 and 2) positioned to direct light from the light source toward the sample.

With respect to claims 8 and 9 of the application, patent claim 8 sets forth a processor (lines 1-6) coupled to the spectrometer for determining characteristics of the sample using a monitor signal generated by the spectrometer in response to receiving light reflected from the mirror and a measurement signal generated by the spectrometer in response to light reflected from the sample, the processor determines the characteristics of the sample based on a ratio of the measurement signal relative to the monitor signal.

***Allowable Subject Matter***

Claims 4, 5 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 10-16 are allowed over the prior art of record.
